Title: >US-09-361-652-1

Description: (1-840) from US09361652.pep

Perfect Score: 6338

Sequence: 1 MLFWAAHLLLSLQLVYCWAF.....NNTEHFQASIQDYTRRCGTT 840

Scoring table:

PAM 150 Gap 11

earched: 188963 seqs, 23686106 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: a-geneseq36 1:geneseqp

Statistics: Mean 38.602; Variance 175.356; scale 0.220

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

method described above. The compounds identified can be used to treat diseases or disorders characterised by abnormal calcium homeostasis, e hyperparathyroidism, osteoporosis and other bone and mineral-related disorders. They can also be used for the treatment of diseases and disorders associated with disrupted Ca2+ responses, e.g. seizures, stroke, spinal cord injury, hypoxia-induced nerve cell damage such as cardiac arrest or neonatal distress, epilepsy, neurodegenerative diseases such as Alzheimer's disease, Huntington's disease and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          519
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 567

(Claim 5; Fig 47; 174pp; English.
The bovine parathyroid calcium receptor gene encodes a 1085 amino acid protein. The tissue from which this receptor and receptors from human parathyroid and rat kidney are derived, respond to changes, and control changes, in calcium ion concentration, e.g. parathyroid hormone regulates (22) homeostasis in blood and extracellular fluid, and kidney function alters through changes in Ca2+ levels in juxtaglomerular and proximal tubule cells in the kidney. The purified receptors (produced receptor activity, especially those that can be used to screen for compounds that modulate calcium receptor activity, especially those that can be used to treat diseases associated with the receptors in these tissues. They can also be used

The present sequence is bovine parathyroid cell receptor 1 (BoPCaR 1).
The specification includes details of molecules that can modulate one or more inorganic ion receptor activities, and antibodies and antibody fragments targetted to inorganic ion receptor proteins. To proteins, nucleic acids and antibodies may be used to treat disorders by modulating one or more inorganic ion receptor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The tissue from which the human parathyroid calcium receptor and receptors from bovine parathyroid and rat kidney are derived, respond to changes, and control changes, in calcium ion concentration, e.g. parathyroid hormone regulates Ca2+ homeostasis in blood and extracellular fluid, and kidney function alters through changes in Ca2+ levels in juxtaglomerular and proximal tubule cells in the kidney. The purified receptors (produced recombinantly) can be used to screen for compounds that modulate calcium receptor activity, especially those that can be used to treat diseases associated with the receptors in these tissues. They can also be used to raise antibodies for use in detection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo sapie

Screening for calcium receptor-active compounds - by recombinant expression of nucleic acid encoding calcium receptor and determin the effect of compounds on calcium receptor activity claim 1; Fig 49; 176pp; English.

A method has been developed of screening for a compound able to a one or more activities of a calcium receptor (CR) comprises: (A) contacting a recombinant cell with a test compound, where the recombinant cell comprises a recombinant nucleic acid expressing provided that the cell does not have functional CR expression froe endogenous nucleic acid; (B) determining the ability of the test compound to affect one or more activities of the calcium receptor (C) comparing the ability with the ability of the test compound to
                                                                                                                                                                                                                                         (BGHM ) BRIGHA (NPSP-) NPS PH Balandrin MF,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 recombinant nucleic acid. The present sequence represents human parathyroid CR, designated a phupcaR 4.0. The nucleic acid sequence of phupcaR 4.0 can be used as part of the recombinant nucleic acid in the method described above. The compounds identified can be used to treat diseases or disorders characterised by abnormal calcium homeostasis, e.c. hyperparathyroidism, osteoporosis and other bone and mineral related disorders. They can also be used for the treatment of diseases and disorders associated with disrupted Ca2+ responses, e.g. seizures, stroke, spinal cord injury, hypoxia-induced nerve cell damage such as in cardiac arrest or neonatal distress, epilepsy, neurodegenerative diseases such as Alzheimer's disease, Huntington's disease and parkinson's disease, dementia, muscle tension, depression, and anxiety.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            affect the one or more CR activities in a cell not comprising recombinant nucleic acid. The present sequence represents huma parathyroid CR, designated a pHuPCaR 4.0. The nucleic acid see pHuPCaR 4.0 can be used as part of the recombinant nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             407

                                                                                                                                                                                                                           C gland adenoma tumour using pBoPCRRI as a hybridisation probe. mRNA was consisted from a 39 year old caucasian male diagnosed with primary chyperparathyroidism and two clones of approx. 5 and 4 kb were identified. These cDNA's were injected into Xenopus cocytes which were consisted for the presence of functional calcium receptors. Both clone types gave rise to functional calcium receptors as assessed by the compression of calcium-activated chloride currents upon addition of calcium receptor agonists, e.g. NPS R-467 and NPS R-568. Sequence analysis of the two cDNA clones indicated the existence of at cleast two sequence variants differing in the 3' untranslated region and compression may result from alternative polyadenyiation. Sequence variation also exists in the 5' end of the inserts. These sequence variation compared the calcium receptor variation occur within the coding regions of cDNA clones phupCaR5.2 and phupCaR4.0 demonstrating that they encoded distinct proteins. Sequence variation occur within the coding cregions of cDNA clones phupCaR5.2 and phupCaR4.0 demonstrating that they encoded distinct proteins. Sequence analysis of the human CaR gene concoded by pHupCaR5.2 between residues 536 and 537 of the protein encoded by pHupCaR5.2 between residues 536 and 537 of the protein encoded by pHupCaR5.2 between residues 536 and 537 of the protein encoded by pHupCaR5.2 between residues 536 and 537 of the protein encoded by pHupCaR5.1 between residues 536 and 537 of the protein encoded by pHupCaR5.1 between residues 536 and 537 of the protein encoded by pHupCaR5.1 between residues 536 and 537 of the protein encoded by pHupCaR5.1 between residues 536 and 537 of the protein encoded by pHupCaR5.1 between residues 536 and 537 of the protein encoded by pHupCaR5.1 between residues 536 and 537 of the protein encoded by pHupCaR5.1 between residues 536 and 537 of the protein encoded by pHupCaR5.1 between residues 536 and 537 of the protein encoded by pHupCaR5.2 between residues 536 and 537 of the protein encoded by pHup

The specification includes details of molecules that can modulate one or more inorganic ion receptor activities, and antibodies and antibody fragments targetted to inorganic ion receptor proteins. I proteins, nucleic acids and antibodies may be used to treat disorders by modulating one or more inorganic ion receptor activities, preferably disorders of calcium homeostasis, e.g. hyperparathyroidism and osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DNA encoding calcium receptor polypeptide(s) - useful therapeutic purposes, e.g. hyperparathyroidism and ost Claim 20; Columns 125-134; 174pp; English.

The invention relates to polynucleotide sequences encoding mammalian pheromone receptor polypeptides. The polypeptides are expressed in murine and rat vomeronasal organ. The products can be used for modifying pheromone activity, e.g. for decreasing pheromone receptor mediated signal transduction. They can be used for controlling fertility and behaviour in vertebrates and invertebrates. Compositions comprising the polypeptides are particularly useful in e.g. controlling fertility in livestock and controlling reproduction in rodents or insects by interrupting the normal behaviours of rodents or insects that result in reproduction. The present sequence represents a rat kidney extracellular

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      proximal tubule cells in the kidney. The purified receptors (produced recombinantly) can be used to screen for compounds that modulate calcium receptor activity, especially those that can be used to treat diseases associated with the receptors in these tissues. They can also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ς
                                                                                                                                                   696

                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                              contacting a recombinant cell with a test compound, where the recombinant cell comprises a recombinant nucleic acid expressing the CR, provided that the cell does not have functional CR expression from cendogenous nucleic acid; (B) determining the ability of the test compound to affect one or more activities of the calcium receptor; and (C) comparing the ability with the ability of the test compound to affect the one or more activities in a cell not comprising the recombinant nucleic acid. The present sequence represents rat parathyroid CR, designated a pRakCaR 3A. The nucleic acid sequence of pRakCaR 3A can be used as part of the recombinant nucleic acid in the method described above. The compounds identified can be used to treat diseases or disorders characterised by abnormal calcium homeostasis, e.g. typerparathyroidism, osteoporosis and other bone and mineral-related disorders. They can also be used for the treatment of diseases and disorders associated with disrupted Ca2+ responses, e.g. seizures, stroke, spinal cord injury, hypoxia-induced nerve cell damage such as in cardiac arrest or neonatal distress, epilepsy, neurodegenerative diseases such as Alzheimer's disease, Huntington's disease and demontial muscle tension and mineral-related and demontial demonts a muscle tension and apprietred and demontial demonts and apprietred and demontial demonts a muscle tension and apprietred and demontial demonts a muscle tension and apprietred and demonts and apprietred apprietred and demonts and apprietred apprietred and demonts and apprietred apprietred and apprietred apprietred and apprietred apprietred apprietred apprietred and apprietred apprie

The present sequence is rat kidney cell calcium receptor 3A (RakCaR 3A).

The specification includes details of molecules that can modulate one or more inorganic ion receptor activities, and antibodies and antibody fragments targetted to inorganic ion receptor proteins. In proteins, nucleic acids and antibodies may be used to treat disorders by modulating one or more inorganic ion receptor activities, preferably disorders of calcium homeostasis, e.g. hyperparathyroidism and osteoporosis.

Modulation of the expression of the aquatic PVCR activates or inhibits aquatic PVCR mediated ion transport and endocrine changes that permit fish to adapt to fresh or salt water. The method facilitates the aquaculture of marine fish and can provide for the development of marine fish that are easily adaptable to fresh water aquaculture. Sequence 1026 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This protein comprises dogfish shark kidney calcium receptor related protein (SKCaR-RP), an aquatic polyvalent cation-sensing receptor (PVCR). Its amino acid sequence was deduced from a kidney cDNA clone (see T89290). It shows 74% homology to rat kidney CPVR and bowine parathyroid PVCR and possesses general features that are homologous to PVCR proteins, including a large extracellular domain, 7 transmembrane domains and a cytoplasmic C-terminal domain. Also claimed are: an isolated PVCR present in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated Aquatic polyvalent cation-sensing receptor - u develop products for increasing or decreasing the salinity of fish for use in aquaculture Claim 9; Fig 5A-B; 57pp; English.

The present sequence is human parathyroid cell calcium receptor 5.2 (HupCaR 5.2).

The specification includes details of molecules that can modulate one or more inorganic ion receptor activities, and antibodies and antibody fragments targetted to inorganic ion receptor proteins. I proteins, nucleic acids and antibodies may be used to treat disorders by modulating one or more inorganic ion receptor activities, preferably disorders of calcium homeostasis, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           hyperparathyroidism and osteoporosis.

Claim 6; Fig 48; 174pp; English.

The tissue from which the human parathyroid calcium receptor and receptors from bovine parathyroid and rat kidney are derived, respond to changes, and control changes, in calcium ion concentration, e.g. parathyroid hormone regulates Ca2+ homeostasis in blood and extracellular fluid, and kidney function alters through changes in Ca2+ levels in juxtaglomerular and proximal tubule cells in the kidney. The purified receptors (produced recombinantly) can be used to screen for compounds that modulate calcium receptor activity, especially those that thissues. They can also be used to raise antibodies for use in detection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     W54845;
